EDUCATION

Master of Science in Artificial Intelligence Systems <i>EPITA (École Pour l'Informatique et les Techniques Avancées)</i>	September 2025 - Present Paris, France
B.Tech. , Major in Electronics and Communication Engineering <i>Padmasri Dr. B. V. Raju Institute of Technology</i>	2020 - 2024 India

EXPERIENCE

AI Automation Specialist PrimeloopAI (Freelance) Built AI automation pipelines for multiple clients, cutting manual steps out of their data and operations work.	April 2025 - June 2025 <i>Remote</i>
Founding AI Engineer Aspireit Built the AI backend for a recruitment platform from scratch as the main developer on a small team. Up-front candidate signal let recruiters skip most of the screening and first-round funnel, cutting time-to-hire around 30%.	April 2024 - April 2025 <i>Remote</i>
Software Engineer - AI/ML micro1 (Freelance) Trained and evaluated large language models on code generation tasks. Wrote and reviewed test cases across Python, TypeScript, and Go, built adversarial prompts to find where the models broke, and used RLHF to push accuracy on the harder problems.	March 2024 - April 2024 <i>Remote</i>

PROJECTS

Unified RAG Multimodal RAG app that handles text, images, audio, and video in one pipeline, using Gemini embeddings with hybrid routing between a local ChromaDB store and Google's managed backend based on input type. Technologies: Python, Streamlit, ChromaDB, Google Gemini, Google File Search	GitHub
NutriLive Realtime nutrition tracking app. A FastAPI backend streams meal and nutrition data over WebSocket sessions to a React and TypeScript frontend, with Gemini handling the food analysis. Technologies: Python, FastAPI, WebSocket, React, TypeScript, Google Gemini	GitHub
Menu Vision Point it at a restaurant menu and it produces a browsable, photo-rich version. OCR extracts the items, Imagen 4 generates the food photos concurrently, and a chatbot handles dietary questions on top. Technologies: Python, Streamlit, Google Gemini 2.5 Flash, Google Imagen 4	GitHub
CLI Tower Defense Terminal tower defense game in Go where different LLMs compete against each other in real time. Any model with an API (OpenAI, Gemini, others) can be swapped in without touching the game logic. Technologies: Go	GitHub

SKILLS

Programming	Python, Golang, HTML, CSS, JavaScript
Frameworks	Flask, Django, FastAPI, LangChain, LangGraph, CrewAI, AutoGen
Libraries	TensorFlow, PyTorch, Transformers, Hugging Face, Agno
Cloud & Tools	Git, Docker, AWS, PySpark, Airflow, Grafana, Snowflake
Databases	PostgreSQL, MongoDB, MySQL, AWS Redshift, Neo4j, Redis
Languages	English (Fluent), French (A2 - Actively learning), Telugu (Native), Hindi (Native)

ACHIEVEMENTS

Winner, Smart India Hackathon 2022 · Runner-up, MEDCUORE Tech Innovation Challenge 2023
